SUMMARY

Results-oriented and highly motivated individual with a unique blend of work experience in pharmacies and a deep-rooted passion for technology. I made a pivotal career shift by attending Galvanize to become a web developer, and my journey culminated with the successful completion of my B.S. in Computer Science from Southern New Hampshire University in the Summer of 2023.

Technology has been an integral part of my life, and this fervor drives my eagerness to contribute to its constant evolution, practicality, and broad application. My ultimate objective is to leverage my newfound knowledge and skills in web development to forge a meaningful and lasting career in the field, all while becoming an invaluable asset to any collaborative team. I am excited to embark on this exciting journey and make a significant impact in the world of web development.

PROGRAMMING LANGUAGES AND PLATFORMS

JavaScript	Cascading Style Sheets	Express.js
HTML	(CSS)	Java
NoSQL	Node.js	C++
SQL	WordPress	Python
Linux RedHat	React.js	Agile Project Management
PostgreSQL	Redux	MongoDB
Github	Docker	AWS
Angular.js	Heroku	

EDUCATION AND LICENSES

Education:

Southern New Hampshire University
Bachelor of Science in Computer Science
Graduation Date: August of 2023

Galvanize, Inc.
Full-Stack Web Development Program
Graduation Date: March of 2019

Greenway High School
Graduation Date: May of 2010

Licenses:

PTCB Pharmacy Technician Certification
Arizona State Board of Pharmacy Technician License

EXPERIENCE AND EMPLOYMENT

Walmart Stores, Inc. *Certified Pharmacy Technician*   (April 2012 – Present)
  Accepted and inputted prescription information and filled prescriptions for approval by on-duty pharmacists. Responsible for restocking pharmacy materials and ordering drugs. Answered phone calls and aided with patient concerns.

ieLinks, Inc. *Full-Stack Web Developer*   (April 2019 – September 2019)
  Recruited by company to create and maintain content within web applications by providing front and back end web development services. Created educational courses for logistical companies to provide work/trade training, and to provide education for Commercial Drivers Licensing. Worked on multiple company-wide projects simultaneously and provided assistance with development planning on each major project.

Banner Health *In-Patient Pharmacy Technician*   (September 2016 – October 2017)
  Provided and supplied the entire hospital with patient-specific medications from the onsite pharmacy under the supervision of the pharmacist. Assisted in preparing compounded and intravenous medications and chemotherapeutic agents.

APPLICATIONS

Pharmacy Application – DMenace92/pharmacy-app

- Application designed with friendly user interface to allow general consumers to list, track, and organize prescription and general medication as needed.
- Technologies Used: JavaScript, CSS, HTML, React.js, Redux, MongoDB, Mongoose, Node.js, Express, and Bootstrap

Comic Book Store – DMenace92/Q3-final-project

- Designed an e-commerce website with a shopping cart feature where users may access and purchase comic books.
- Technologies Used: JavaScript, CSS, HTML, Node.js, Express, PostgresSQL, React.js

Portfolio– https://github.com/DMenace92/Portfolio

- Personal Deployed website. This website displays my skills and accomplishments that I accrued throughout the years. The website was deployed by Heroku along with a active functioning emailer that is connected to my personal email.
- Technologies Used: JavaScript, HTML, CSS, React.js, mailtrap.
- This Website is live and can be visited at www.dennisenwiya.dev.

NOTABLE EXPERIENCE

React/Redux

Extensive experience with React and Redux, which provides the tools needed to build functional applications and to enhance overall user interface and experience for clients. Most of my projects have involved React and Redux to a significant degree, mostly because of its usability. My Capstone Project, "The Pharmacy App," relied heavily on the state and props alongside redux to connect the user interface to the back end.

AWS

My AWS journey has been transformative. Navigating the vast array of cloud services, I harnessed the power of scalable computing and storage. AWS's intuitive interfaces eased deployment, while services like EC2 and S3 flexibly accommodated my needs. Through Lambda, I grasped serverless architecture's efficiency, while DynamoDB's NoSQL capabilities streamlined data management. Networking prowess emerged via VPC, and CloudWatch guided vigilant monitoring. IAM bolstered security, ensuring controlled access. AI/ML tools empower predictive insights. Elastic Beanstalk simplified app deployment. However, cost management demanded attention, and AWS's documentation became a valuable ally. Overall, AWS empowered me to innovate, with a learning curve worth the rewards.
